PROFESSIONAL SUMMARY

Computer Science graduate with internship experience at SDAIA's National Center for AI (NCAI), working on Python back-end testing and workflow automation in Dataiku DSS. Built a secure file storage system as a Python desktop application and rebuilt it for the web with Next.js and Supabase. Seeking a junior software engineering role.

EDUCATION

Bachelor of Computer Science

2026

Majmaah University, Saudi Arabia

Graduation Project: Secure File Storage System

PROFESSIONAL EXPERIENCE

Software Engineer Intern

Aug 2025 – Oct 2025

National Center for AI (NCAI), SDAIA – Quality Engineering Department | Riyadh, Saudi Arabia

- Enhanced a Python-based Dataiku DSS macro that automates repetitive team processes, reducing manual effort in internal workflows.
- Implemented Metrics, data-quality Checks, and Scenarios in Dataiku DSS to automate monitoring and alerting.
- Ran back-end tests and data-processing experiments, validated database data, and documented the results for the team.
- Debugged and updated Python back-end files to keep them compatible with system updates.

PROJECTS

Secure File Storage System (Graduation Project)

github.com/azzam-dev/graduationproj-web

Desktop: Python, PyQt5, MySQL, AWS S3, OpenCV | Web: Next.js, TypeScript, Supabase (PostgreSQL)

- Built a desktop file storage application in Python and PyQt5 with MySQL, AWS S3 storage, and OpenCV face login.
- Rebuilt it as a web application on Next.js and Supabase, enforcing access control in the database with Row Level Security on every table.
- Implemented face login using face-api.js descriptors matched with pgvector inside a rate-limited Edge Function.

Alatareeq – Location-Aware Reminder App

github.com/azzam-dev/alatareeq

React Native (Expo), TypeScript, Supabase (PostgreSQL, Edge Functions), TomTom Search API

- Built an Arabic-first reminder app for drivers in React Native (Expo) that alerts the user only when a matching shop is ahead on their route and the detour is under a set limit.
- Wrote a rule-based Arabic reminder parser in a shared TypeScript core covered by 133 unit tests, and served places from the TomTom Search API through Supabase Edge Functions that cache results per map tile for 90 days to stay within a 2,500-request monthly quota.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C++, SQL, HTML, CSS

Frameworks & Libraries: React, React Native (Expo), Next.js, Tailwind CSS, PyQt, OpenCV

Platforms & Tools: Dataiku DSS, Supabase (PostgreSQL), MySQL, AWS (S3), Git, GitHub

Concepts: Object-Oriented Programming, Database Design, Software Testing, Workflow Automation, Cybersecurity Fundamentals

LANGUAGES

Arabic: Native

English: Advanced
